Release Notes

Build: 17.09.03

Colleague Software Ltd

Date Created: 03/10/17

Colleague 7 Release Notes - 17.09.03

1. Introduction

This document communicates the new features and changes in this release of Colleague 7.

2. About This Release

Sprint Goal: Upgrade Colleague's memory cache and deployment architecture to support and enable further performance improvements, whilst refining the product based on client demand.

3. New Features

3.1 PBI 22271 - Memory Cache Issue (Prototype)

State: Done

Type: Bug

User Notes: An Investigation into why Edge will sometimes show different 'Available Fields' in Mandatory Fields Maintenance to Chrome, has determined a memory cache issue in the product that requires us to upgrade the memory storage solution we have in the Azure environment.
Recommended solution is Azure Redis Cache. Before applying this update to all systems, we needed to build a prototype with the required code changes and apply the Redis cache for testing.

3.2 PBI 24008 - Checklist - Delete Button.

State: Done

Type: Enhancement

User Notes: Previously when in the checklists area in Admin, there was not an option to delete a checklist item. This has now been added.

3.3 PBI 3551 - Use mvc bundles.

State: Done

Type: Enhancement

User Notes: All local JavaScript and CSS file references have been moved into a 'bundle' to help with the Control F5 refresh issues we have been experiencing. Other benefits include increased performance and security.

3.4 PBI 23368 - Add Reminder Date and Time Option to Task Creation (on entity)

State: Done

Type: Enhancement

User Notes: When creating a new task, there is now an option to set a specific reminder date and time.

3.5 PBI 28149 - Reports Interface (Minor Updates)

State: Done

Type: Enhancement

User Notes: Reports Parameters can now be defined in a less 'hard-coded' manner and fed into a Report.

4. Bug Fixes

4.1 PBI 20233 - Multiple Text Criteria Will Result In No Text Being Highlighted On View Text Feature

State: Done

Type: Bug

User Notes: When searching over documents, the view text option now allows hit-highlighting of multiples words and/or phrases.

4.2 PBI 22714 - Offer icon does not show on Quick Search.

State: Done

Type: Bug

User Notes: The standard 'Offer' icon is now shown in Quick Search results

4.3 PBI 27382 - Combine the 1st Line and 2nd Line Address in the Parsing Process.

State: Done

Type: Bug

User Notes: House Number and Street Name was split over two fields: These have been combined into one field – Address Line 1:

4.4 PBI 27755 - Can Not Search Across New Skills.

State: Done

Type: Bug

User Notes: This is a background change to update the 'entity_skills' table when adding or removing Skills (this is used for Skills Search).

4.5 PBI 21925 - Remove Option In Search Doesn't Do Anything.

State: Done

Type: Enhancement

User Notes: This 'Remove From Results' menu option in Search didn't have a function implemented for it. This now removes the selected row(s) when pressed.
